### **Abstract**

Chronic kidney disease (CKD) is emerging to be an important chronic disease globally and India is likely to pose for this major problem and this increase of CKD leads to the decline of Glomerular filtration rate (GFR). GFR is routinely used to assess kidney function. Research studies and clinical populations with measured GFR were done from March 2017 to December 2017 and 52 patients were interacted. GFR was measured from standardized creatinine levels, sex, race, and age.

**Keywords:** Chronic Kidney Disease, Glomerular Filtration Rate, Body Mass Index.
