TEXTILE INDUSTRY GOING GREENER

DR. SMRITI TRIPATHI¹

¹Assistant Professor, Amity School of Fashion Technology, Amity University Rajasthan,
Jaipur

Abstract

India is being one of the lands which own numerous natural plantations. This gives us ample scope and numerous opportunities for the development of natural dyes for textile industry in the country. This article is an endeavor to accumulate the great work done by the researchers to save our environment from disastrous and harmful effect of toxic chemical dyes and other ingredients. Many of the research institutes and agriculture universities have been working to develop a good range eco- friendly and biodegradable dyes, so that the use of the synthetic dyes, which poses as a great threat to us and our environment can be reduced. A large number of plant matter present in our environment such as roots, berries, bark leaves & wood & other organic sources such as fungi & lichens is now being used to produce a vast range of dyes.

Keywords: Natural dyes, synthetic dyes
